

Arve Global Convertible Fund - EUR-I

Share Class EUR I: 105.35 (31.12.2024)

31.12.2024

FUND PROFILE

The Arve Global Convertible Fund is an open-end investment fund incorporated in Luxembourg. The objective of the fund's investment policy is to achieve an appropriate increase in value, taking into account the investment risks. In order to achieve the investment objectives, the fund's assets are predominantly invested globally in convertible bonds and bonds with warrants. The fund is actively managed. The composition of the portfolio is determined by the fund manager according to the criteria defined in the investment objectives/policy of the sales prospectus. The portfolio is regularly reviewed and, if necessary, adjusted. The performance of the fund is compared with the Refinitiv Convertible Global Focus Inv. Grade Hedged Index. The index has no influence on the portfolio composition of the fund. Taking into account the strategy of the fund manager, sustainability risks are taken into account in the investment decision process.

RISKS

Risk Indicator

The risk indicator is based on the assumption that you will hold the product for 5 years. If you redeem the investment early, the actual risk may differ significantly and you may get back less. The overall risk indicator helps you assess the risk associated with this product compared to other products. It shows how likely you are to lose money on this product because markets move in a certain way or we are unable to pay you out.

We have classified this product as risk class 2 on a scale of 1 to 7, where 2 corresponds to a low risk class. The risk of potential losses from future performance is classified as low. In the event of very adverse market conditions, it is highly unlikely that the ability to execute your redemption request will be impaired. **Please be aware of currency risk.** You will potentially receive payments in a different currency, so your final return may depend on the exchange rate between the two currencies. This risk is not considered in the indicator given above. Other risks not included in the risk indicator may be materially relevant: liquidity risk and operational risk. Please refer to the prospectus for further information. This product does not include protection against future market developments, so you could lose all or part of the invested capital.

FUND MANAGER COMMENT

There was no sign of a year-end rally in December. The MSCI World share index fell by a good 2.5%, which seems to show that the prices reached are very stretched. But that is not quite the case. The USA accounts for 74% of the index (in January 2012 it was just over 50%). And with a few exceptions, it was mainly US equities that weighed on the index. Japan was able to post a nice performance of 4.4% in the Nikkei. With a rather modest share of 5.4%, the country is the second-largest market in the index. Hong Kong also posted a good performance of 3.2%. And in Europe, the DAX and the CAC40 were also positive at 1.45% and 1.1% respectively. The political uncertainty in the two countries, to put it kindly, does not seem to be affecting share prices any further. Michel Barnier probably made history as the prime minister with the shortest term in office, Le Pen is flexing her muscles and in Germany the lights are probably going out on the traffic lights.

President-elect Donald Trump is already blowing the war horn, be it with the Panama Canal or punitive tariffs. He would also like to have Greenland now, which will provide further fuel to potential conflicts.

One topic in December was the central banks' interest rate decisions. The SNB surprised once again with a cut of 0.5%, while the others were in line with expectations. Only the Fed's outlook was not well received by the markets and the yield on 10-year Treasuries rose significantly to 4.6%.

The convertible bond market was quieter in terms of new issues than in the previous month. In terms of the number of issues, 2024 was the third weakest year in the last 20 years after 2022 and 2023. But not in terms of volume placed. Here, 2024 is in fifth place in the last 20 years. The issuance volumes of the individual securities have risen significantly, which is accompanied by increased liquidity. Relative valuations rose in December in all regions except the USA. This was more pronounced in Japan and Asia than in Europe. Nevertheless, these three regions are still trading below fair value.

The fund returned -1.42% in CHF, slightly outperforming the benchmark index. The ten best and worst performers present a rare picture. The ten worst performers are all names from the USA. We have built up positions in Anta Sports, Kyoritsu Maintenance and Fluence Energy. On the other hand, we have sold Microchip, Bechtel, STM and Senko.

GLOSSAR

Equity sensitivity (delta): This key figure describes the change in a derivative in relation to the change in the underlying. For example, a 40% delta of the fund means that if all the equities underlying the convertible bonds in the fund move up 1%, the fund theoretically moves 0.40% in the same direction - if all other characteristics remain unchanged.

Conversion premium: The conversion premium measures the distance between the price of the convertible bond and the conversion value (also called parity). It describes the premium you pay for the convertible bond compared to the underlying shares.

Bond Floor: The value of the bond without the conversion option.

Distance to Bond Floor: Indicates how much higher the convertible bonds are trading compared to the bond floors.

Running Yield: Puts the convertible bond's coupon in relation to its price.

Effective Duration: Measures the interest rate sensitivity of the convertible bond.

Volatility: Statistical parameter for fluctuations in prices, here the price of the fund share class.

Downside Volatility: Statistical measure of fluctuations in negative price changes, here the prices of the fund share class.

Maximum Drawdown: Describes the maximum loss to date from the historical high to the historical low of the share class.

VaR: Value at Risk. Describes, with a given probability level, the amount of loss within a period of time that with this probability is not exceeded.

Sharpe Ratio: The ratio measures the excess return (vs. a risk-free investment) in relation to the risk taken (volatility). It is used to estimate the risk ratio.

Sortino Ratio: Similar to the Sharpe Ratio, the Sortino Ratio measures excess return relative to risk, but includes only the fluctuations in negative returns.

Convertible Bonds: Convertible bonds are corporate bonds that offer a fixed interest payment and redemption value. In addition, the holder gets the right to convert the bond into the shares of the issuer.

Exchangeable Bonds: Exchangeable bonds are issued by one company but can be converted into shares of another company.

Bonds with Warrants: The right to interest and repayment as well as the right to acquire shares may exist side by side, ie the shares may be acquired by exercising the option in addition to the bond.

RISK GLOSSAR

Credit Risks:

The Fund may invest part of its assets in bonds. The issuers of these bonds may become insolvent as a result of which the value of the bonds may be lost in whole or in part.

Liquidity Risks:

The Fund may invest part of its assets in securities that are not traded on a stock exchange or similar market. It can be difficult to find a buyer for these papers in the short term. This may increase the risk of redemption of units being suspended.

Counterparty Risks:

The Fund may enter into various transactions with counterparties. If a counterparty becomes insolvent, it can no longer or only partially settle the fund's open claims.

Risks from the use of derivatives:

The Fund may use derivative transactions for the purposes set out under "Fund Profile" above. The increased opportunities from the use of derivatives come along with an increased risk of loss. Hedging against losses using derivatives can also negatively impact the fund's return.

Operational and custody risks:

The Fund may become a victim of fraud or other criminal activities. It may incur losses due to misunderstandings or mistakes by employees of the management company or external third parties or suffer from external events such as natural disasters. The custody of assets, especially abroad, can be associated with a risk of loss resulting from insolvency, breach of duty of care or abusive conduct by the custodian or any sub-custodian.

A detailed description of the risks can be found in the "Risk information" section of the currently valid sales prospectus.

DISCLAIMER

This is a marketing communication. Please refer to the prospectus and to the KID before making any final investment decisions. This publication is not addressed to persons who by domicile or nationality are prohibited from receiving such information according to applicable law. It should be noted that the value of the shares acquired may fluctuate due to fluctuations in the investments in the fund and the market prices of the securities. Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs charged on the issue and redemption of shares. In addition, no assurance can be given for the fulfillment of the objectives of the investment policy. Information on opportunities and risks can be found in the Sales Prospectus. The Key Investor Information must be provided to the investor prior to purchase. These documents can be downloaded in German on the homepage of the Management Company IPConcept (Luxemburg) S.A. (<https://www.ipconcept.com/ipc/de/fondsueberblick.html>) free of charge. In addition, these are available free of charge from the Information and Sales Office. The Management Company may decide to cancel the arrangements it has made for the distribution of the fund in accordance with Article 93a of Directive 2009/65/EG. Further information on investor rights is available in German on the website of the management company (<https://www.ipconcept.com/ipc/de/anlegerinformation.html>). The basis for the purchase is solely the Sales Prospectus, the KID, the Management Regulations and the reports. An up-to-date version can be requested from the respective sales office as well as from the representative in Switzerland. This fund report is neither to be construed as an offer to purchase nor as investment advice. It does not refer to the specific investment objectives, the specific situation, or any requirements of individual persons. In particular, the recipient should carefully consider the suitability of such investment to his specific circumstances and, where necessary, obtain independent professional advice with regards to any legal, regulatory, tax, and other consequences. Despite due care in the preparation of the factsheet, no responsibility is accepted for errors or omissions, or actions based thereon of any kind. Representative in Switzerland is IPConcept (Schweiz) AG, Bellerivestrasse 36, CH-8008 Zurich. The paying agent in Switzerland is DZ PRIVATBANK (Schweiz) AG, Bellerivestrasse 36, CH-8008 Zurich.
